

WHAT EASY INSTALL CAN DO FOR YOU

Projecta's variable Easy Install hanging system ensures that installing a projection screen will now be even easier! Easy Install results in major time savings, leading to a reduction in installation costs. The plug and play accessories also ensure that electrical projection screens are even quicker to install and mount, resulting in Projecta once again confirming its role as market innovator for professional projection and Home Cinema solutions.

1 SIMPLICITY AND EASE

The principle behind Easy Install is simple. First two brackets are mounted to the wall or ceiling, and then the screen may be easily slid into the brackets and secured with screws. Even the largest screens may be quickly and easily installed using this system.

2 FLEXIBLE CHOICE FOR DRILL HOLES

Thanks to Easy Install, the screen width no longer determines the position of the points of suspension. The mounting brackets may be mounted to the wall or ceiling within 50 cm of the two ends of the screen. It is also possible to make corrections either to the left or right after hanging. This means that fixed drilling measurements are a thing of the past. A Projecta projection screen is now even easier to install and always hangs perfectly in no time.

3 PLUG AND PLAY ACCESSORIES

The plug and play accessories make it easy for anyone to install an electrical projection screen: connect the plug to the screen, conceal the wiring neatly in the end caps, and the projection screen is ready to use.

ACCESSORIES FOR CONTROL

Easy Install plug and play RF remote control Plug and play Radio Frequency (868.3 Mhz) remote control. Supplied with a five-channel hand-held transmitter, a plug and play receiver unit and a five-metre long, white cable as standard. The five-channel hand-held transmitter enables the operation of five projection screens using one remote control. Available with European, UK or Swiss plug.

10800055 (EU) 10800066 (UK) 10800067 (CH)

Easy Install wireless projector coupling Projector Interface unit for projectors with a 12 volt DC/ 85 mA signal. The transmitter, which is battery powered, functions in combination with the Easy Install plug and play RF remote control (868.3 Mhz). The transmitter is programmed via the RF receiver.

10800056

Easy Install RF remote control with wireless projector coupling

10800057 (combination of 10800055 + 10800056) (EU)

10800070 (combination of 10800066 + 10800056) (UK)

10800069 (combination of 10800067 + 10800056) (CH)

Easy Install projector coupling with cable Plug and play Projector Interface, 230 Volt; 50 Hz for video projectors with a 12 V DC/ 85 mA signal. Equipped with a manual override switch on the trigger case. Supplied with a five-metre long, white cable as standard. Available with European, UK or Swiss plug.

10800059 (EU) 10800074 (UK) 10800075 (CH)

Easy Install plug and play IR remote control Plug and play infrared remote control 230 Volt/ 50 Hz with one-channel hand-held transmitter, a plug and play receiver with an integrated infrared eye. Potential-free contacts are available in the IR remote control case. This allows a screen to be connected to an operating system or wall switch. Supplied with a five-metre long, white cable as standard. Available with European, UK or Swiss plug.

10800058 (EU) 10800072 (UK) 10800073 (CH)

Easy Install plug and play relay box with potential-free contacts This accessory makes it possible to connect screens to operating systems by using potential-free contacts. This relay box makes it fast and easy to integrate a projection screen into an entire system. The relay box is connected with constant voltage.

10800068 (EU) 10800084 (UK) 10800083 (CH)

Easy Install plug and play RS232/RS422 control kit As an extension to the relay box with potential-free contacts, Projecta also offers the possibility of operating projection screens via RS232/RS422 serial protocol. This makes the projection screen even easier to integrate into an operating system. A distance of 44 metres can be covered by using a UTP CAT 5 cable. By using the RS422 protocol, you can even receive feedback concerning the extent to which the projection screen fabric has been extended.

10800080

Easy Install plug and play RS232/RS422 with IP control kit If 44 metres is still not enough, then Projecta's solution is to operate the projection screen via the Internet Protocol (IP). All that is needed is a connection to the Internet.

10800085

ACCESSORIES FOR CONTROL

Easy Install RF wall-mounted transmitter A wall-mounted transmitter can be added to projection screens which are connected to Easy Install RF controls (868.3 Mhz). The wall-mounted transmitter is ready for immediate use as a battery is supplied with it.
10800065

Key switch A key switch is the solution for preventing unwanted use of your electrical projection screen.
10800009

Pull rod If a projection screen with a spring mechanism is mounted at a height of more than 2.5 metres, then a pull rod is a handy aid for unrolling the screen. The pull rod has a length of 125 cm.

ACCESSORIES FOR MOUNTING

Wall bracket In certain cases it is advisable to mount the projection screen at a distance from the wall. This may be because there is painting on the wall at the point where the projection screen should hang, for example. In the case of overhead projection, it can also be necessary to position the projection screen fabric at an angle in order to prevent distortion of the image. Wall brackets are available in lengths of 75, 30 and 10 cm and in the colours white and black. New brackets which are 10 cm in length make it easy to position a screen over a TV or picture. The SlimScreen's wall brackets are 57 cm in length.
